<div align="center">**Programming Fundamentals**</div>

Project Name: Grading System Generator

Project Members:

1. Syed Maaz Zafar CT-25193
2. Hamza Naveed CT-25186

Proposal:

 Generating marks grades and report cards for students can get tough for professors. To address this, we propose developing a **Student Grading and Performance Management System** a tool that will help teachers input student scores, automatically calculate averages, assign letter grades, and generate personalized remarks.

Objectives:

1. Generate Letter grades for each student ranging from A*-F
2. Allowing marks input and calculating the average
3. Allowing teachers to add remarks for students based on their performance
4. Report cards outputs
5. Making it as user friendly as possible

We hope that this project facilitates the grading system for teachers and ensures fair marking for all students. Teachers will be allowed as many inputs required for as many students there are with the aim of making this complex task as smooth as possible
